

Titel: Recommending at Roskilde Festival

Tema: Programmering og problemløsning -
Programming a Recommender System

Projektperiode:

1. Februar - 24. Maj

Projektgruppe: SW2-A325a

Deltagere:

Casper Lund Pedersen

Casper Susgaard Nielsen

Kasper Christoffer Andersen

Lasse Nikolaj Svenningsen

Mark Nielsen

Mustafa Noorzai

Rasmus Mariegaard

Vejledere:

Peter Dolog

Synopsis:

This project focuses on recommender systems and analyses what is needed to create a working recommender system. It furthermore investigates some of the state of the art recommender systems currently used. The project also takes a deeper look at Roskilde Festivals recommender system and what could be improved in the current system, e.g. the scheduling design, and cold-start problem. Finally, the project gives an alternative recommender system to Roskilde Festival, where it uses a hybrid system of content - and collaborative filtering methods. These methods use the Pearson and Cosine similarity algorithms when creating the recommendations.
